Diagram illustrating a 'Properties' dialog box (labeled 710). The dialog box contains the following fields and controls:

- Cortex:** A text input field containing the word 'Cortex'.
- Key Words:** A text input field containing the text 'software brain metaphors thoght innovative'.
- Category:** A dropdown menu showing 'Company' with a downward arrow button.
- Categories:** A button labeled 'Categories'.
- Time Information:** A section containing:
  - Created: May 30, 96, 09:57:13 PM
  - Modified: May 30, 96, 09:57:13 PM
  - Total Time: 0 days, 01.06.59
  - History:** A button labeled 'History'.
- OK:** A button labeled 'OK' at the bottom center.

Algorithm for drawing the plex with distant thoughts

1. Create a list of thoughts to be drawn and their on screen locations:
  2. Add the central thought to the list.
  3. Add children to the list.
  4. Add parents to the list.
  5. Add jumps to the list.
  6. Add siblings to the list, checking first that they are not already on the list.
  7. Add distant of children to the list, checking first that they are not already on the list.
  8. Add distant of parents to the list, checking first that they are not already on the list.
  9. Add distant of jumps to the list, checking first that they are not already on the list.
  10. Add distant of siblings to the list, checking first that they are not already on the list.
11. Draw the lines that connect each thought:
  12. For each item in the list:
    13. Get each item in the list:
      14. If the two items are related, draw lines between them from and to the appropriate gates.
15. Draw the distant thoughts:
  16. For each item in the list:
    17. If it is a distant thought, draw it.
18. Draw the other thoughts:
  19. For each item in the list:
    20. If it is not a distant thought, draw it.
